

ARMAAN METALWALA

Dallas, TX • (206) 294-2069 • armaan.metalwala@gmail.com • [LinkedIn](#) • [Portfolio](#) • [GitHub](#) • [Projects](#)

EDUCATION

The University of Texas at Dallas – Richardson, TX

Dec 2026

Bachelor of Science in Computer Science

- GPA: 3.6 • Texas Excellence Scholarship • Transferred from Texas A&M University
- *Relevant Coursework:* Data Structures & Advanced Algorithms, Object-Oriented Programming, Software Engineering, Computer Architecture, Operating Systems, Databases, Computer Networks, UNIX, Mathematical Foundations of Computation

EXPERIENCE

Telenav – Software Engineer Intern; Santa Clara, CA

June 2026 – Aug 2026

- Shipped an in-app AI assistant ("Ask AI") wiring a FastAPI backend to live Snowflake Cortex data, letting the team query campaign funnel and spend metrics in natural language instead of writing SQL
- Cut the Quality dashboard's first-load time ~30% (~15s to ~11s) by parallelizing Snowflake queries, adding a connection pool, lazy-loading below-fold charts, and caching report responses
- Built "Graphify," a repo-mapping tool with automated git-hook refresh that reduced AI coding-assistant token usage 68–88% on codebase questions, adopted by the full engineering team
- Shipped secured admin controls (token-gated, backend-enforced auth), Coverage drilldowns, exports, and reusable React components across four dashboards, + a Jenkins CI/CD pipeline with smoke tests - all backed by 200+ passing pytest/Vitest tests

World Music Foundation – Software Engineer Intern; Remote

May 2025 – Aug 2025

- Rebuilt the organization's public website, improving Largest Contentful Paint over 40% through WebP image optimization, CDN delivery, and responsive-design best practices in HTML/CSS/JavaScript
- Migrated legacy content into a WordPress CMS structure, enabling non-technical staff to manage event listings and blog posts without developer support
- Implemented SEO metadata & analytics tracking to align the redesign with Business standards & measure donor engagement

JPMorgan Chase & Co. – Software Engineering Virtual Forage Experience

Nov 2024

- Built real-time financial data visualizations with JPM's Perspective library, refining the usability of a trading analytics dashboard
- Debugged frontend/backend data-feed mismatches to restore accurate live output and configured an isolated Python environment for consistent, reproducible builds

Sneaker Priorities – Founder & Operator; Colleyville, TX

June 2019 – Aug 2024

- Founded and scaled a footwear/apparel resale business to 4,000+ transactions and \$50K+ gross profit over five years
- Built custom Python scripts to track inventory, sales trends, and profit margins, automating restock and pricing decisions
- Applied data-driven marketing and customer analytics to increase retention by 30% and achieve 40% YoY repeat sales growth

PROJECTS

Novo AI Visibility Orchestrator – Full-Stack / AI Engineer

April 2026

- Built an agentic SEO/AEO audit tool (FastAPI, React/Vite) that crawls a URL and returns search and AI-answer-engine readiness scores, competitor gap analysis, and compliant draft content via six agents
- Surfaced actionable findings in live QA — e.g., adding one FAQPage JSON-LD schema would raise the target's AEO score from 66 to 86 — with all output labeled draft for human review
- Backed pipeline with 45 pytest tests & deployed on Railway & Vercel; Claude Code, GStack, Obsidian, Graphify agentic workflow

B2B Review Automation SaaS – Lead Engineer

July 2025

- Engineered a full-stack SaaS platform automating B2B review outreach over SMS and email (FastAPI, SQLAlchemy, PostgreSQL/Supabase), with APScheduler driving hourly reminder jobs and delivery tracking
- Eliminated a duplicate-message race condition under concurrent scheduling by enforcing a PostgreSQL composite unique constraint, guaranteeing idempotent sends
- Built secure, modular REST APIs with Pydantic validation and JWT auth; deployed a React + Tailwind frontend on Vercel and backend on Render

ADDITIONAL

- **Honors:** Texas A&M Datathon – 2nd Place (Spring 2024) — placed 2nd at MLH's data science datathon; led prompt-engineering and modeling under a tight deadline, balancing efficiency and accuracy
- **Technical Skills:** Python, Java, C/C++, JavaScript, TypeScript, SQL, FastAPI, React.js, Flask, LangChain, LangGraph, Pydantic, SQLAlchemy; Snowflake, dbt, PostgreSQL, MySQL, Redis, MongoDB, Docker, Jenkins, CI/CD, Git, REST APIs, JWT, AWS
- **Certifications:** IBM Machine Learning; AT&T Technology Academy (Software, APIs, Cloud & ML, Agile/Scrum, Unit Testing)
